 4D Ultrasound  
 Gender Determination  
 Glossy Color Pictures  
 CD-ROM with Digital Color Pictures  
 DVD Video of Entire Ultrasound   
 45 minute session  
 \$200

**Important Info for 3D/4D Ultrasounds:** The optimal time for 3D/4D scans is 27 to 32 weeks of pregnancy. It is difficult to get good images if the baby is older. Sometimes the baby is camera shy and his or her face is in a position or facing a direction that makes getting an image of their face difficult. In this case, we will try to image another part of the body (arms, hands, feet, legs, etc.)

The 3D/4D OB Ultrasound is for keepsake purposes only and does not replace the 2D detailed OB & maternal evaluation exam that is also offered at YCAIC.

\* Gender determination is probable.

\*\*Packages are nonrefundable.
